performance test insertion

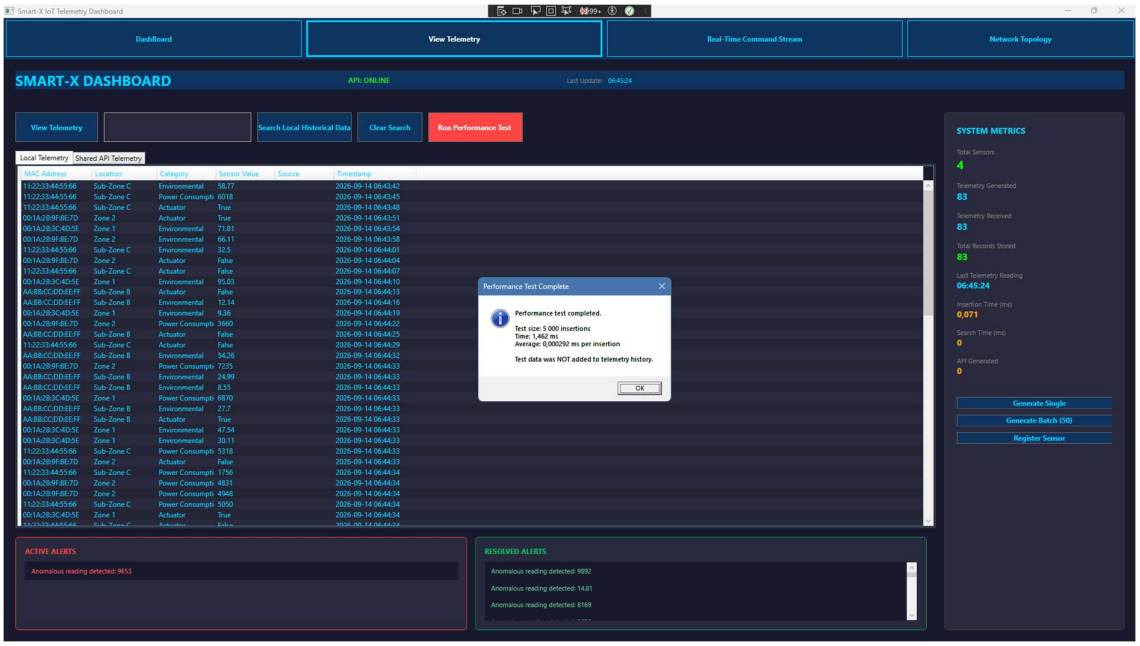

100

1000

5000

Tests done to the performance with three batch sizes: 100, 1000, and 5000 insertions.

All three completed in under 2 milliseconds. Whether inserting 100, 1000 or 5000 records, the system stays responsive. This shows the in-memory storage is efficient and handles bursts of telemetry without any slowdown.
